

Numeric Operations

Human Calculator

What is the value of n after the script?

```
n = 9//2  
n = n**2
```

Human Calculator

**What is the value of y if user enters 9?
and if user enters 8?**

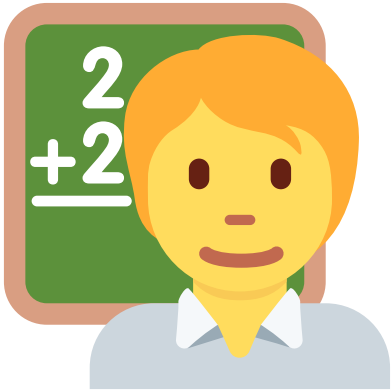

```
x = int(input("Enter an integer  
number"))  
y = x%2
```

Code Detective

Find the bug 

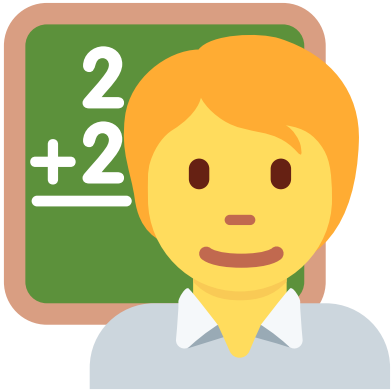

```
x = ((1 + 2) * 3 / (4 - 0.5))
```

Human Calculator

What is the result?

```
n = 9//2 - 2 ** 2
```

Human Calculator

What is the result?

```
x = 4+5j
```

```
y = 3+3j
```

```
print(x.imag + y.imag)
```

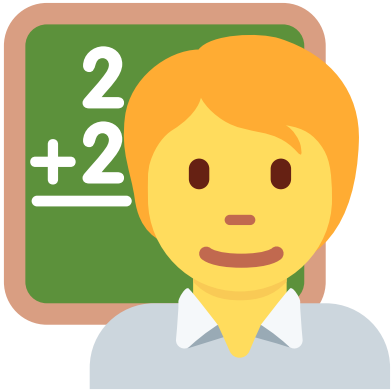

Strings

Code Detective

Find the bug 

```
my_message = Hello World
```

Human Calculator

What is printed?

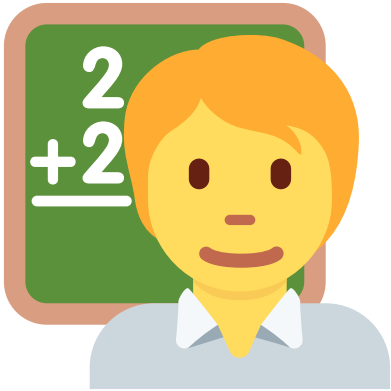

```
x = "2"  
y = 3  
print(x*y)
```

Code Detective

What does this bot do?

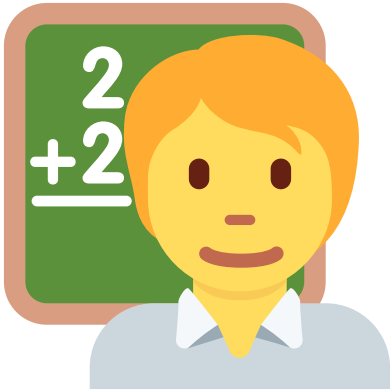

```
a = input("What did you say")  
print(a + "- duh-duuh")
```

Human Calculator

What is printed?

```
area = 9      #area covered  
total = 10    #total area  
print(f"Area = {area}, covered: {area/total:.0%}")
```

Human Calculator

What is printed?

```
s = "Hello"  
print(s + "!")  
print(s.replace("l","L"))  
print(s)
```

Boolean variables

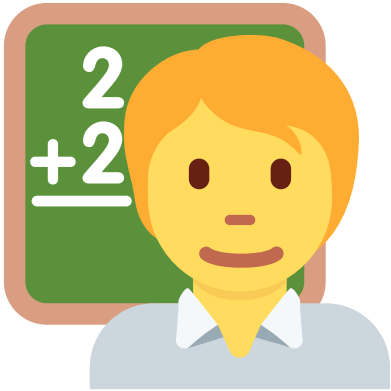

Code Detective

Find the code bug 

```
x = 1
```

```
y = 2
```

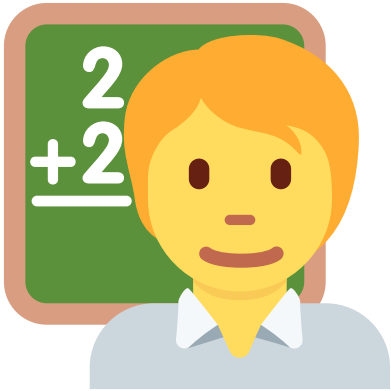

```
a = x = y # boolean variable
```

Human Calculator

What is printed?

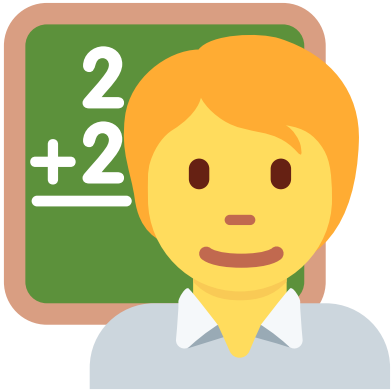

```
s = "Hello"  
print(s + "!")  
print(s.replace("l","L"))  
print(s)
```

Human Calculator

What is printed?

```
age = int(input(what is your age?))  
print(18 <= age < 65)  
print(bool(""))  
print(bool("False"))
```

Human Calculator

What is printed?

```
def ping():  
    print("ping");  
    return True  
print(False and ping())  
print(True or ping())
```
